

Data Engineering Project

Milestone 2

Deadline on Saturday, 10th of December.

Description -

Identify an additional feature that you could add to the data that would help better understand the dataset and give you further insights. How you decide to extract the data is totally up to you (API/Web Scraping/Other).

After extracting the data you need to perform the following.

- 1- Encode the feature(if possible) and add the original and encoded values to the lookup table(if label encoding was performed) .
- 2 - Scaling (if possible and necessary)
- 3 - Ask/Analyse 2 questions related to the feature you just extracted and visualise your findings.

Note - The data extracted has to be added after cleaning the dataset(Milestone 1). If you have not completed milestone 1; you need to do so before starting milestone 2 .

Submission guidelines -

Same as Milestone but replace milestone 1 with milestone 2. Moreover the dataset year to the name of the attached notebook . I.e DE_MILESTONE1_MET_20_2015.ipynb .
